Sumith

Arun Vasan

Objective

To present the working FitBuddy AI application through a clear, repeatable demonstration sequence.

Prepared for academic project submission

8. Project Demonstration Phase

Demonstration Objective

- Show how a user profile is submitted, a seven-day plan and wellness tip are generated, the plan is stored, feedback revises it and the API health endpoint responds.

Pre-Demo Checklist

- Start server and verify home page.
- Confirm mock mode or test Gemini API credentials are configured.
- Use a fictional sample profile; do not display real personal information.
- Ensure database is ready and test data is disposable.
- Prepare browser tabs for the application and API docs.
- Keep a backup screenshot or mock-mode path if network/API access fails.

Demo Scenario

- Sample profile: User ID DEMO001; name Demo User; age 22; weight 68 kg; goal general wellness; intensity medium; experience beginner.
- Step 1: Open the FitBuddy home page and explain the profile form.
- Step 2: Enter the sample details and submit.
- Step 3: Show the seven-day plan structure, daily warm-up, main workout, cool-down and wellness tip.
- Step 4: Submit reasonable feedback such as “Please make the routine easier and add more recovery.”
- Step 5: Show the revised plan and explain how feedback is stored.
- Step 6: Open /docs and show the API endpoints; call /api/v1/health.
- Step 7: Briefly show the protected admin dashboard, without exposing credentials.

Suggested Presentation Flow

- Introduction and problem statement — 1 minute.
- Project objectives and features — 1 minute.
- Architecture and technology stack — 1 minute.
- Live user workflow and feedback revision — 3 minutes.
- Testing, limitations and future enhancements — 2 minutes.
- Team contribution and closing — 1 minute.

What to Explain

- The AI service uses profile-aware prompts and requests a seven-day JSON plan. SQLite stores user and plan records. Feedback triggers a revision request. Mock mode supports predictable local testing. The application is a wellness planning demo, not medical advice.

Future Enhancements

- Add export/print of plans, richer progress tracking, improved accessibility, stronger authentication, expanded test coverage, deployment monitoring and user-controlled data export/deletion. Any new health-related features should

receive appropriate safety and privacy review.

Team

- M. Vijayasathy — Team Leader
- Bharath
- Harsha
- Sumith
- Arun Vasan

Closing Statement

• FitBuddy AI demonstrates how a web application, database and generative AI service can work together to provide a structured fitness-planning experience with user feedback and safety-conscious boundaries.
